We serve natural, biodynamic & low intervention wines...

what is natural wine?

Natural Wine is farmed organically and made without adding or removing anything in the cellar. No additives or processing aids are used, and intervention is kept to a minimum. They are unfiltered and unfiltered, resulting in a living wine with character and personality - sometimes with cloudiness and a slight effervescence.

what about biodynamic?

The idea behind biodynamics is that everything in the universe is interconnected, including the moon, planets and stars. Biodynamic farming is completely organic, but also follows a special lunar calendar. Additionally, biodynamic wine allows no 'manufactured' additions, even organic ones. For example, commercial yeast won't be added to the wine, instead harnessing naturally occurring yeasts from the grapes and winery - the ultimate expression of **terroir**.

The issue of... *sulphites*

Sulphur dioxide (SO₂) is used by many winemakers to preserve wine and prevent oxidation. Natural wine has no added sulphur (although some may naturally occur). Apart from the fact that the idea of pumping chemicals into your wine is a bit unpleasant, the use of SO₂ has been linked to allergic reactions, asthma and much worse hangovers.

Green(er) Wine

You wouldn't want to eat badly reared meat or unsustainable fish, so why drink wine that is full of chemicals and bad for the planet?

At Farmyard our wines are chosen with ethics and sustainability in mind. All wine has an impact on the environment, but, just as with food, there are ways to drink greener. Most of our range is natural or biodynamic, and others are low intervention and organic. We call it #GreenWine.

how is our wine sustainable?

Working out whether a wine is sustainable or not is a complicated business, but a few of the key principles to consider are whether farming methods are organic, water and energy efficiency in the vineyard and winery, and whether winery workers are paid fairly and treated well. Transportation is also an important issue, which is why the majority of our wines are from Europe (and Sussex and Kent). We believe a few treats are worth bringing in from further afield, though

last but not least... we love it

At the end of the day, what is the point in natural, sustainable or biodynamic wine if it doesn't taste great. For us, natural wine is exciting and expressive on the palate, it is wine with a story to tell and a direct connection to its roots. We believe that what's in your glass should reflect its natural environment - grapes and growers going their own way, a true taste of terroir and its people.

naturally vegan + vegetarian

The reason that not all wine is vegetarian or vegan is the way that it is clarified through a process known as 'fining'. Common agents used for this are casein (milk protein), albumin (egg whites), gelatin (animal protein) and isinglass (fish bladder). Natural wine is unfinned so naturally vegan.

Hellen (natural, biodynamic, ve)

Progetto Calcarius, Nero di Troia, Puglia, Italy, 11.5%

Created out of the shared passion of two Italian natural winemakers, this Puglian beauty made using spontaneous alcoholic fermentation without temperature control is grassy, herbaceous and a little wacky on the nose, but with excellent balance, mouthfeel and acidity to match. An excellent and endearing number.

47

Shepherd Wine (natural, ve) 🍷

Vini Di Giovanni, Vernaccia Rossa, Umbria, Italy, 12.5%

The man behind this beautiful light red is a shepherd turned cheesemaker turned winemaker. It hails from the rolling hills of Pianello to the north of Perugia, from land of less than three hectares - which the vines share with sheep and olive trees. Even the label of this wine is special, it's made from grass. Incidentally, this light red would work well with either lamb or goat's cheese. We love this wine.

48

Tanuki Bob (organic, ve)

4 Kilos, Manto Negro / Syrah, 2016, Mallorca, Spain, 14%

This mouthwatering, fresh and feisty wine doesn't just taste good, it does good.
